

RET Project: A Hybrid Regression Algorithm for Solar Power Forecasting

Research Experience for Teachers (RET) Summer 2020

Kathy Turner, Ed D, Mentors: Graduate Student Kristen Jaskie, Dr. Jean Larson, Dr. Andreas Spanias
SenSIP Center, School of ECEE, Arizona State University.

RESEARCH BACKGROUND/DESCRIPTION

- This RET program focus is on applications of ML methods and IoT used in solar energy prediction.
- Data collected from one residential property was used to learn, validate, and test the ML algorithms.
- My background is Applied Math and CS.

RESEARCH RESULTS/REMARKS

- Residential property: learning, validation and testing.
- The linear predictions were somewhat lower than the real numbers.
- The NN polynomial faired better with a less than one Kw difference.
- Further research with increased data bank should result in more reliability.

Linear regression MSE

Daily MSE for Test Set = 0.011805533359688493

	Real	Predictions
0	5.2	2.135746
1	4.4	2.135949
2	3.7	2.136152
3	4.3	2.136355
4	5.2	2.136559
...
475	5.5	2.232214
476	5.6	2.232417
477	5.8	2.232620
478	6.0	2.232823
479	6.0	2.233026

480 rows x 2 columns

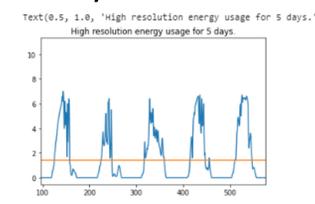

NNF Polynomial MSE

Final test MSE 0.033942436435379864

	Predictions	Real
0	5.2	4.758029
1	4.4	4.759663
2	3.7	4.761297
3	4.3	4.762931
4	5.2	4.764564
...
475	5.5	5.534110
476	5.6	5.535744
477	5.8	5.537378
478	6.0	5.539012
479	6.0	5.540645

480 rows x 2 columns

5-Day visualization

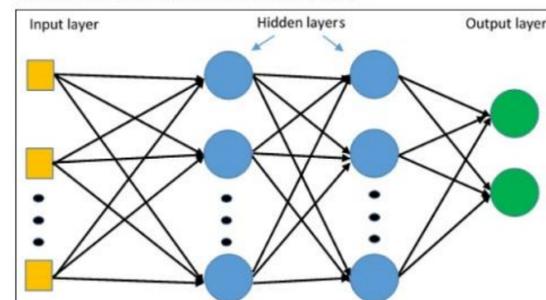

RESEARCH OBJECTIVES/PLAN

- Develop the use of ML algorithms in energy
- Predict future solar energy production
- Integrate what I have learned into the classroom

Neural Network (Multi-layer Preceptrons) Forecasting

Multi-layer Preceptrons are shallow neural networks (as opposed to deep learning networks). This means that they usually only have a couple of hidden layers.

These networks generally have the following structure:

LESSON PLAN OBJECTIVES

- Students will be able to catalog their research
- Students will be able to communicate their findings
- Students will be able to predict what type of algorithm may have been used, given different types of algorithms used in Machine Learning (ML) and analyze its design and structure.
- Students develop a hypothesis of how the innovation could be used in the future or used in an alternative way.

LESSON IMPLEMENTATION/OUTCOMES

- Students will be online researching their chosen topic and taking notes for the next 45 minutes. Students have a resource page and requirement page to help keep them focused.
- Closure is performed during the last 5 minutes of class. Circulate and scan every checklist, making sure it is stamped with the date stamp.
